Computer, Network, Electrical, Cable TV, and Telephone Wiring Services

Corporate Network Solutions, LLC is a professional voice, data and entertainment system wiring installation company. Our expertise and knowledge of cabling systems offers the customer a quality installation engineered to enhance their current systems with the flexibility to upgrade for future needs.

As an independent vendor, we are able to analyze your current applications and supply you with the best premise wiring installation in a cost effective manner. We have extensive knowledge of all existing architectures including Fast Ethernet, Gigabit Ethernet, Token Ring, and FDDI. We pride ourselves on timely management of projects to ensure your system is on-line at time of cut-over.

Effort is a large part of what Corporate Network Solutions offers. Our cabling is 100% tested, guaranteed, and conforms to EIA/TIA Standards. We supply documentation of the cable plant to make future moves, adds, and changes easier.

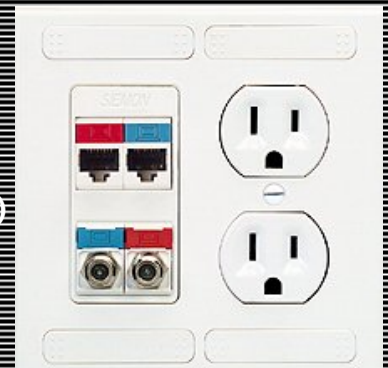

Corporate Network Solutions, LLC always installs Category 5E (or higher) wire and connectors for computer networks, to maximize network speed and data reliability. After installation, each wire is frequency tested and certified with certification equipment to verify it will handle high speed network traffic reliably. Many installers leave out this step, leaving customers searching for the cause of network communication problems. Most installers also are not able to plan the network infrastructure in conjunction with the wiring, as we can.

Let your network infrastructure provide a solid base for your company's IT implementation.

CNS will also become a single point of contact for any network communication issues that might come up, since we can provide the network switches, routers, and other communication devices as well as the base wiring.

Our expertise includes technologies like:

- Ethernet
- Fast Ethernet (100Base-TX)
- Gigabit (up to 10x faster)
- Fiber optic
- Wireless (short and long range)
- Home Entertainment Systems
- Cable and Satellite TV
- Telephone Wiring
